EU Regulation 94/62/EC

Packaging and packaging waste

European Packaging legislation requires that the total amount of lead, cadmium, mercury and hexavalent chromium must not exceed 100 ppm. Toy Safety regulation EN71 part 3 and CONEG also require levels of less than 100 ppm for the above mentioned heavy metals.

The typical content of the heavy metals mentioned above in a self-adhesive material is

- Lead: < 1 ppm
- Cadmium: < 1 ppm
- Mercury: < 2 ppm
- Hexavalent Chromium: < 0.1 ppm

We at HERMA do not use lead, cadmium, mercury, hexavalent chromium or their compounds, in the manufacturing process of self-adhesive materials.

As a result, the content of lead, cadmium, mercury, hexavalent chromium or their compounds in HERMA self-adhesive materials is below 100 ppm.

The different types of packaging used at HERMA also in compliance with the above mentioned EU directive.

However, we cannot exclude impurities, which are not in the responsibility of HERMA.
